

ABS ERP v2.0

abs

Business Software Solutions

Features

Client Server Based

1. Real Time Updates of Stock & Accounts
2. Access/Monitor/Maintain your Business from anywhere

Multi User

Multi user means software will be run by various users with different roles. User will be able to execute and see only those functions for which the rights are given to him according to his role in company.

Benefits of the multiuser are ease of management and security of data. In an online environment it is necessary to maintain the user right management so as no discrepancy occurs in the functioning of software. User given rights to handle certain things will have responsibility of doing it right.

Multi Tasking

Multi Threaded environment means ability to perform multiple task at a time. For example We can print bill simultaneous with viewing the inventory report and entering purchase invoice details.

Benefits of the multithreading is user would be able to perform multiple task while other task is being processed. This will enhance the performance of the user and ability to achieve multiple tasks at a time

Multi Location

Multi Stock Place means ability to increase the billing from more than one place with different bill series. In future may be if company increases its business and open up a new store somewhere else then they need not worry about the invoicing and billing. They will have to just install client software to the new location and starts billing using the same feature and server.

Benefits of the multi location are ease of expanding business without bothering about manageability and accounting. The company can maintain and control new location just like they use to do previously.

Performance

Our Team of professionals has maintained performance parameter in every aspects of designing the software. Unlike others providers which concentrate on providing more features and compromise the usability, we have focused more on usability and performance in every feature we provide.

Technologies Behind

1. Microsoft .Net4.0
2. Microsoft Sql Server 2005
3. Client Server Architecture

Future Benefits

1. Highly robust and allows no mistakes
2. Highly Flexible Design for Customization.
3. High Performance Environment with use of latest technology.
4. Fully Configurable.
5. Fast Tally transfer without much hassle.
6. Flexibility: The software is completely flexible to meet client's requirement even in future.
7. Reliability: The software gives accurate results even over period of time
8. Reusability: The software can be reused if moved to any another field of business.
9. Maintainability: To maintain the software, client needn't worry heavy system changes. Software is completely flexible; changes in server will be reflected across the system.
10. Usability: Multiple users can use the software to achieve their goal in efficient way.
11. Priority is given to ease of use over random features which are least needed.
12. User psychologies are pre studied to achieve the software flow.
13. Secured: user level as well as system level security applied.
14. Auto backup of database reduces chances of data loss.
