What We Do ?

PixceLite Systems has outstanding competences and accumulated an impressive experience in highly reliable & critical application development, System integration and business intelligence solutions especially in All Type Enterprise Solutions.

You wouldn't hire a fencer to build your house, and you shouldn't hire an old-style System Integrator to build your e-business. We are a balanced team of both technical expertise and practical business.

As a IT solutions provider we can accept responsibility for the design and implementation Enterprise standard Solutions.

Our policy is to implement every installation to a high standard, whilst displaying flexibility and understanding towards our client's business objectives.

It is our total dedication that our clients truly appreciate, and therefore they consistently return time and again. This policy has led to an individual, close, working relationship with each client, which has been further developed to encompass Project Management and Software solutions.

Why use us?

Although we have a strong and experienced management team, our success is wholly due to the efforts of our workforce, who carry out their tasks within set guidelines and to the quality standards we demand.

High Quality Individual Professional Installations

Successful installations are achieved by design, discussion and sheer attention to detail. The needs of tomorrow's businesses are difficult to predict, that is why specifying the right infrastructure for your communications network is of vital importance. Not only must the system be able to cope with today's demanding internet, intranet, video conferencing, e-mail and multimedia applications, but also accommodate the unknown applications of tomorrow.

FREE - Pre-Sales Support

Strong, personalized client relationships are built through experiencing the service level we offer. To aid this, we offer Free Network Design, Site Survey & Written Quotation services.

Competitive Costing

Our quotations are always provided on a fixed cost basis and include everything required for the project, no hidden costs.

Project Management

Every Project we undertake is a one-time endeavor, and the experience of our Project Managers gives you the peace of mind that your project will run smoothly from Start to Finish. Our Project Managers understand the customer, the technology and the solution.

Prompt Response Post Installation Support

In the unlikely event of a post-installation problem occurring we are noted for our flexibility, and speed of response.

Software Development

Our company consists of top professionals with solid and proven technical experience , including project management , system programmers, system analysts and web developers, Our group of consultants has a proven expertise working in different projects and environments in the Middle east as well as overseas . Our company specializes in several areas such as Staff augmentations (manpower) for environment such as .NET/ JAVA, DOS/WINDOWS/IOS DB2/SYBASE/FOXBASE/ORACLE/MS SQLSERVER , SAP , JDE and others.

Application Design

The software design phase involves developing the Class diagram for all objects in the system. During this stage the states and methods of each class will be defined. Activities include Develop the Analysis Model and Develop the Design model (class and object diagrams)

Quality Assurance

In order to ensure the Quality of the product, The QA team is involved from the very start of the project. Each deliverable is reviewed against the requirements and once the QA team approves the quality only then the deliverable is released for submission to the client.

Support Acceptance Testing

The onsite team provides support to the customer during the acceptance testing process. If there is any re-work required the onsite team decides whether it can be carried out onsite or it has to be sent back to the offsite development team. The regular change management process is followed.

Training and Documentation

Training is conducted not only for the relevant end users but also for the IS staff as well. End-user documentation is also produced. The documentation is produced in conjunction with the business usage of the system.

Deployment
The Onsite team collaborates with the customers team to deploy the software and move it into production. **Post**

Production Support

During this phase, if any issues are reported, the onsite team member provides support in analyzing and resolving the issue.
