TECHNOLOGY EXPERTISE:

Our core technologies encompass the primary operating system and platforms, applications servers, databases and the development tools we use to build our software solutions.

DEVELOPMENT / APPLICATION PLATFORMS:

[JSP & Servlets, JDBC]

DATABASE SYSTEMS:

MOBILE APPLICATIONS:

WEB DESIGN AND GRAPHIC DESIGN:

We offer IT solutions to frame the foundation of our client's business ideas. Our expert team analyzes and understands the requirements, pain areas and opportunities of improvements through technology solutions. And there after guides, creates, deploys technical solutions and is always serve the client till the time it is a success.

We at Iyris Technologies have always believed in the culture of putting the client first at all situations. We are committed in building and developing stronger and deeper relationships with our client and building trust over time by striving to honor our commitments and by providing quality results consistently. We believe in delivering the best IT Solutions, respecting honesty, integrity and trust.

Payment Terms:

We follow the below detailed project cost estimation methods:

"Fixed price contract" is the costing process where a customer has already determined the task and put forward an exact project cost approved by an outsourcer.

"Development on time & material basis" is the costing process where a customer has not

determined his task clearly. In this case, stages of the task inception, business analysis, requirements accumulation and analysis become necessary. The customer learns an approximate project cost as soon as the task inception stage is completed. Further the project cost will be specified and by the time the analysis stage starts, the customer will have had the detailed project progress plan and the budget estimate in terms of the system development as well.

An acceptable compromise that would combine these costing approaches can be worked out in any case. We are open to discuss and agree the payment terms and schedule that works best for both the parties.
