ABOUT US

We are an organization primarily focusing on mobile application development. Founded in 2011, having operated as a freelance enterprise since 2008 developing several applications for devices that run on the iOS, we have since diversified our operations with applications for Android and Windows Phone.

WHAT DO WE DO?

Following 3 years of success, in 2011 we decided to put our knowledge and resources to make the youth aware of the career prospects that the field of mobile application development has in store for them. Hence apart from mainstream application development, we now impart training to budding mobile application developers and arm them with apposite tools to make their respective marks on the field of mobile application development. Here are some of the other services that we offer:

- IT Solutions & Consulting
- Corporate Solutions (Branding, Online Marketing, Presentation, Profile, Training and Consulting)
- Design Solutions
- Content Management(Enterprise Content Management)
- BPO Services

IOS & ANDROID APPS

Since 2011, our team of top-notch developers have managed to deliver a number of top-in-line applications that have quickly grown up the ladders of popularity on the Android Market, an ode to their hours of hard-work and perseverance towards delivering applications of near-perfect quality. Having developed applications ranging from GPS tracking to Sketchpads, our team is as diverse as talented, a rare combination and a reflection of the character that our organization

aims to achieve over its broad spectrum of operations. Flexibility is a natural strength that our developers possess born off a deep understanding of the core concept of the Android platform and there is yet to be a problem that we have come across that we haven't managed to crack yet. We respect and relish challenges and are inquisitive and ever exploring new frontiers, building a steady path for all who follow. You only have to go through our impressive portfolio to understand the potential that our developers boast. Couple that with diversity and flexibility and you have the dream team at your disposal.

OUR NOTED WORK ON THE ANDROID PLATFORM INCLUDE

GPS Tracking PRO (GPS tracking and Geo-Coding)

We have also developed several other apps that are used for the client's private purposes and hence, I can only send you the description of those projects. These have been done for both iOS and Android.

They are as follows.

Chiller Monitoring System:

This project is focused mainly towards the monitoring the chiller details that is remotely located through the service. Often ping with the service and get the status and brings the updated values to the view.

Clinical Guider:

The project involved developing a Clinical Tool for managing the set of Physician in order to can use diseases for the patient, this health tool Guide the patients in a better way.

Forensic Mobile Notes Application:

The project is more like making notes regarding the forensic details. The users of this apps are students and researchers who can make the notes regarding their current study.

Physician's Aid

It's a digital prescription pad/ appointment holder/ calender for a doctor that allows them to do all their daily functions in a tablet instead of a laptop/PC. This gives them the complete freedom and lets them be on the go

Technician's assistant

This app is for the busy technician to update the report of each work from where they are with the help of a phone/tablet. It pins their location on the map for cross verification and updates the data in the server immediately

Service Report

Lets the professional go green without the use of any paper. This is for a service engineer who needs to go to the customer house to fix the product or offer any service. The customer signs of the app and it is sent straight to the database/server with just a click of a button. Allows seamless integration and immediate updates without any hassle and delay. This saves time and relieves the burden of data entry.

SOME OF OUR OTHER WORK

- Faber Castell
- Virgin Mary
- DCC Tracking Mobile System
- Travel and Vacation Applications
- Make New Buddies
- Army Alarm Clock

Other apps that are under process at the moment:

www.roaringwomen.com

www.ouramazingnorway.com

www.uwont.com

www.ioaindia.com

www.dareblog.tv

OUR BUSINESS MODELS

FIXED PRICE: We will charge the client a fixed sum for the entire project. The amount to be paid will be determined before the project is begun. There will be no additional charges made in the event of any delay in completion born off natural causes. The extra payment will occur only when the requirements or modules change from the initial agreed upon agreement.

TIME AND MATERIAL: We will charge the client on an hourly basis. The client will be given a break-up of the project segment-wise and explained how much time will be taken to complete each segment so as to generate a tentative idea as to the cost involved and the time that will be taken to execute the required project. Our hourly price ranges from \$15-\$25.

OTHER INFORMATION

YEAR OF ESTABLISHMENT: 2011

NO. OF PROJECTS COMPLETED: 21

TOTAL IOS DEVELOPERS: 6

TOTAL WINDOWS PHONE DEVELOPERS: 2

TOTAL GRAPHIC DESIGNERS: 3

TOTAL ANDROID DEVELOPERS: 6

DEVELOPERS' EXPERTISE:

DEVELOPER #1:

Expertised in Database sqlite. Reading writing and editing the database which is stored locally or externally. The database can contain images, text, etc.

DEVELOPER #2:

Expertised in Web Services. Establishing communication between the app and the website/web server. This is crucial for most apps as the app needs to be updated whenever the website is updated. This is easily established with Web Services. SOAP, JSON, XML are his strong points.

DEVELOPER #3:

Expertised in Core data and Animation. UI transitions, fetching and sending data from and to different screens respectively and user inputs,

DEVELOPER #4 & #5:

Complete UI modelling, designing, positioning, animating the UI, screen, interconnectivity between UI screens, books, etc.

DEVELOPER #6:

Geo-coding, communication protocols, assembling the different segments of the project into a single final project and uploading the app into the Android market.
