

About Us

Our company is a leading and pioneering wooden pallet rental and pallet pooling service in the country. Established in 1997, we started as a division of Sancar Enterprise. As the business grew swiftly, we spun off as a separate company in 2002. We evolved into what is now known as messe & handel Corporation.

Our company later expanded operations in Cebu and Davao and introduced new pallet models "EC-25", "T-11" and "WS-12". In 2007, we marked the successful implementation of Philippines' first and only effective and efficient pallet pooling through our very own Strategic Web Application and Pallet Pooling (SWAPP) Program. As a member of various affiliations like Efficient Consumer Response (ECR), our company has helped in the implementation of standardized pallet size and quality thus giving companies the viable option and convenience to use pallets for variety of products while earning substantial savings.

At present, messe & handel Corporation continues its journey in innovating its products and services to help cater to the enormous and changing needs of our customers. We are continuously taking a big role in the effective distribution of products and materials of manufacturing, warehousing and logistics firms in and outside the supply chain industry.

Why rent SANCAR pallets?

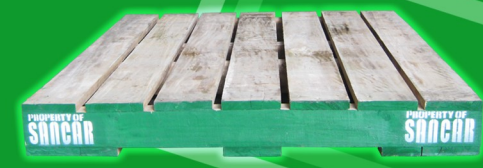

RENTED PALLETS

- Zero capital investment. Pallet capital investment can be used for major business requirements.
- Variable utilization cost.
- No manpower and man-hours required for pallet repairs.
- No need to invest and manage pallet repair components.
- Additional pallet requirement can be rented on short term during peak season and then returned after utilization is over.
- SWAPP System* provides efficient management and monitoring of pallets eliminating pallet losses.

VS.

OWNED PALLETS

- Need to put up pallet capital investment to produce owned pallets incurring cost of capital (interests).
- Fixed cost due to investment.
- Additional manpower and man-hours required to repair pallets.
- Required to invest and manage pallet repair components.
- Need to invest in back-up pallets for peak season requirements and these pallets are not utilized once it's off-peak.
- Inefficient monitoring and management control results in substantial pallet losses.

Pallet Model: WS-12
 Material: Gmelina Wood
 Size: 1200 mm x 1200 mm x 150 mm
 Type: Stringer Class, Non-Reversible, 2-Way Entry, Multiple Use
 Dynamic Load: 1500 kgs
 Static Load: 5000 kgs

Suitable for: Raw Materials, Cement, Rice, Flour, Sugar and other materials in sack packaging

**also available WS-12 R2 (reversible)*

*SWAPP System

Strategic Web Application for Pallet Pooling, an online program that effectively covers all pallet movements across supply chain loop. The system implements palletized delivery to retailers using Sancar pallets. The transfer of pallets is processed via the SWAPP Program through the Delayed Transfer Module that generates document as reference for the dispatched trucker. A successful delivery is always assured as all transactions can be approved by the recipient. With the SWAPP System, the players and movers within the supply chain enjoy the benefits by way of:

- No pallet inventory reconciliation with the retailers
- No lost pallets during transport
- Damaged pallets are retrieved and rehabilitated
- Maximized utilization of leased pallets
- Increased turn-around time of delivery trucks
- Pallet availability from multi-sites
- Efficient pallet monitoring
- Guaranteed supply of fit-to-use pallets

SANCAR Wooden Pallets

Pallet Model: EC-25
 Material: Gmelina Wood
 Size: 1200 mm x 1000 mm x 157 mm
